## Overview

Mark has drafted and prosecuted numerous patent applications for a variety of medical imaging and monitoring technologies, including computed tomography (CT), magnetic resonance imaging (MRI) systems, x-ray systems, positron emission tomography (PET), and electrocardiogram (ECG) monitoring. Mark has also worked in a wide range of other technologies, including compressed air energy storage, plug-in hybrid vehicle systems, smart controls for electric motors, semiconductor fabrication, micro-electronics packaging, and turbine engines, to name a few.

His background in physics allows him to address technological fields that touch on the fundamentals of physics from a hardware and/or algorithm perspective. Mark finds being exposed to new technologies exciting and challenging. Specifically, he enjoys wearing two hats: one as a student who learns from inventors, and one as a teacher who translates their inventions into patent literature.

These interests extend into his free time, during which he enjoys fixing things, making things, and writing things.

## Education

- Marquette University Law School, Milwaukee, Wisconsin, J.D.
- University of Wisconsin – Milwaukee, B.S. in Physics
  - Secondary Science Teaching Certification

## Practice Areas

- Patents
- Litigation and Dispute Resolution

## Memberships

### Professional Associations/Memberships

- International Trademark Association
- ChiWIP (Chicago Women in Intellectual Property)

### Admitted

- State Bar of Wisconsin
- U.S. Patent and Trademark Office

Courage is resistance to fear, mastery of fear – not absence of fear.

~ Mark Twain
